1 Project Overview

This project analyzes customer shopping behavior using transactional data from 3,900 purchases across various product categories. The goal is to uncover insights into spending patterns, customer segments, product preferences, and subscription behavior to guide strategic business decisions.

2 Dataset Summary

- **Rows:** 3,900
- **Columns:** 18
- **Key Features:**
 - Customer demographics: age, gender, location, and subscription status.
 - Purchase details: item purchased, category, purchase amount, season, size, and color.
 - Shopping behavior: discount applied, promo code used, previous purchases, frequency of purchases, review rating, and shipping type.
- **Missing Data:** 37 values in the Review Rating column.

3 Exploratory Data Analysis Using Python

We began with data preparation and cleaning in Python:

- **Data Loading:** Imported the dataset using pandas.
- **Initial Exploration:** Used `df.info()` to check structure and `.describe()` for summary statistics.
- **Missing Data Handling:** Checked for null values and imputed missing values in the `Review Rating` column using the median rating of each product category.
- **Column Standardization:** Renamed columns to snake case for better readability and documentation.
- **Feature Engineering:**
 - Created an `age_group` column by binning customer ages.
 - Created a `purchase_frequency_days` column from purchase data.
- **Data Consistency Check:** Verified whether `discount_applied` and `promo_code_used` were redundant, then dropped `promo_code_used`.
- **Database Integration:** Connected the Python script to PostgreSQL and loaded the cleaned DataFrame into the database for SQL analysis.

4 Data Analysis Using SQL: Business Transactions

We performed structured analysis in PostgreSQL to answer key business questions.

1. **Revenue by Gender** — Compared total revenue generated by male vs. female customers.

	gender text 	revenue numeric 
1	Female	75191
2	Male	157890

Figure 3: Revenue by gender.

2. **High-Spending Discount Users** — Identified customers who used discounts but still spent above the average purchase amount.

3. **Top 5 Products by Rating** — Found products with the highest average review ratings.

	item_purchased text	Average Product Rating numeric
1	Gloves	3.86
2	Sandals	3.84
3	Boots	3.82
4	Hat	3.80
5	Skirt	3.78

5 Dashboard in Power BI

Finally, we built an interactive dashboard in Power BI to present insights visually.

6 Business Recommendations

- **Boost Subscriptions:** Promote exclusive benefits for subscribers.
- **Customer Loyalty Programs:** Reward repeat buyers to move them into the Loyal segment.

- **Review Discount Policy:** Balance sales boosts with margin control.
- **Product Positioning:** Highlight top-rated and best-selling products in campaigns.
- **Targeted Marketing:** Focus efforts on high-revenue age groups and express-shipping users.
